

# Why measure CO<sub>2</sub> in your fleet vehicles?

**You can't see CO<sub>2</sub>** but we all breathe it in and out 24 hours a day, every day. High CO<sub>2</sub> levels in your vehicles can interfere with the occupants' oxygen uptake, causing dizziness, headaches, difficulty concentrating, fatigue, sleepiness and impaired cognitive function. The CO<sub>2</sub> breathed out by others can carry invisible airborne viruses and microbes that spread disease. **PL's** new CO<sub>2</sub> Logger empowers you to quickly detect and correct CO<sub>2</sub> problems. Make your vehicles healthier and safer with a **CO<sub>2</sub> Logger** from Precision Loggers.
